Review Comment Response, 1/5/93

January 5, 1993

According to Lee Witbeck and Amy Powell, the Sanitary Sewage Lagoons are sampled for cadmium per an Environmental Survey in 1988 in which DOE-CH requested a more extensive sampling and analysis plan. Despite searching throughout the central files, I could not pinpoint a statement verifying this requirement. Nonetheless, I am confident that Mr. Witbeck and Ms. Powell's explanation is sufficient and can be confirmed if necessary.
